Core story

We innovate by nature.

In a time where technological development is advancing at high speed and humanity's access to information has reached unprecedented levels, it is worth taking a moment to consider how far we have come.

Perhaps also to consider whether we could have made it to this point in history alone, or whether our greatest accomplishments are the result of people coming together for a shared purpose.

Kalundborg is the biggest bioproduction cluster in Scandinavia and a hub for some of the region's most visionary businesses. It is a city of ambition; an old market town in Western Zealand that has gained international attention as it reaches out for talents from all over the world.

And it is talented students who lie at the heart of the plans to open a new research and education centre in Kalundborg: Emerging talents who will drive future growth and innovation and whose mission is to bring about a more sustainable future for all of us.

We have named the research and education centre Helix Lab. The word "helix" has to do with symbioses – in this case, the symbiosis between

academia and business; between Kalundborg and the world; and between students from all over the world. What makes a helix beautiful is that each strand supports the other, just like the emerging talents and experienced companies that will work together and learn from one another.

Helix Lab will open its doors to the world and turn industry 4.0 into more than just a buzzword. A place where students and scientists from industry and academia can build and take part in meaningful communities. Where they can join forces in an interdependent relationship between research and manufacturing, human and machine – heart and mind.

Helix Lab represents an alliance between industry, academia and the public sector, the aim of which is not simply to establish a research and education centre of an international calibre. The aim is to establish a community of knowledge sharing, co-creation and partnerships. A community that will be the core of a powerful bioprocess innovation ecosystem in Denmark.

A place where we innovate by nature.

Image style

Image style guidelines

In our images we show the study environment at Helix Lab in an honest and professional way.

Our images must appear natural and reflect natural working situations.

Motives on images must be true to everyday life at Helix Lab. Equipment and scenery must resemble what is actually used by Helix Lab or our partners.

When using images for symbolism, we use close ups.

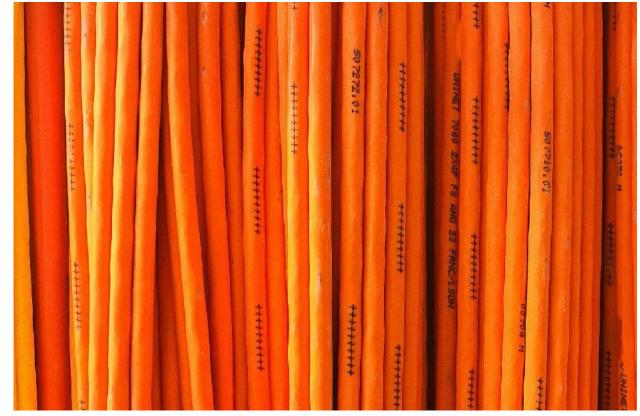

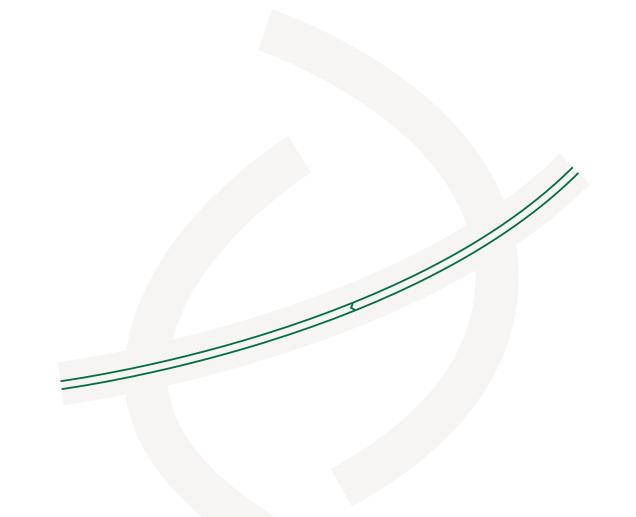

Graphic element

The bridge

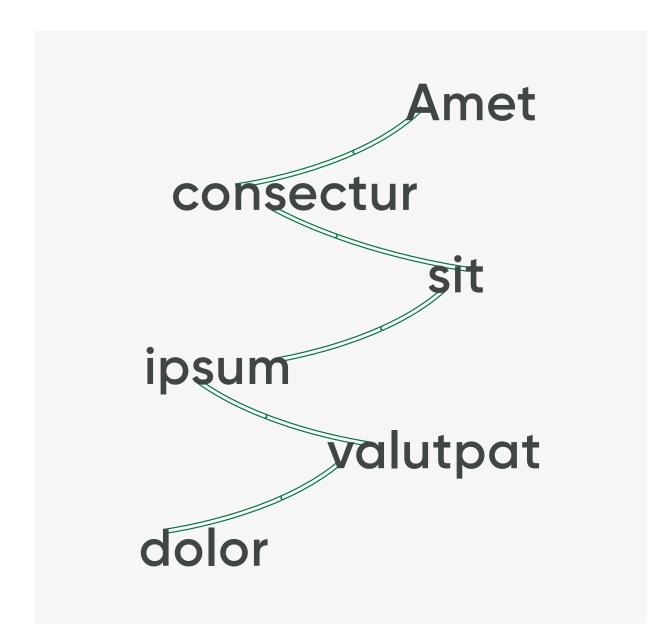

Our design element; the bridge connecting either side of our Helix Lab bookmark.

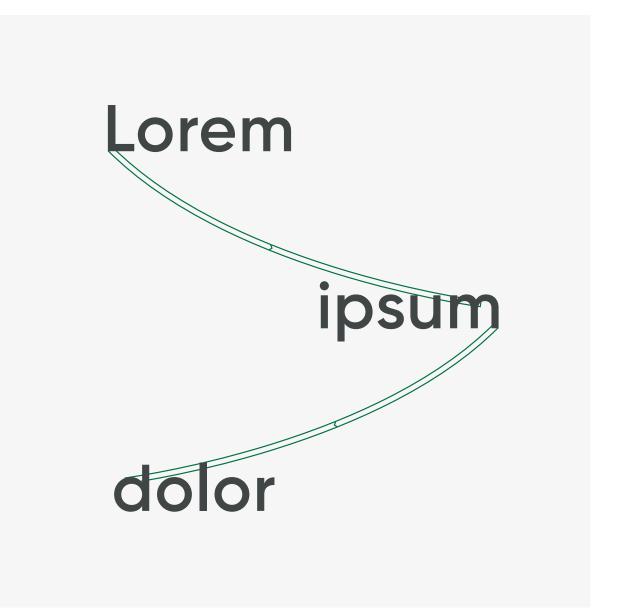

Display headlines

The bridge connects each word in the headline. In order to create interesting and dynamic layouts the bridge can be rotated or flipped. The strokes on each element in a given display headline must remain the same.

Our display headline's composition may vary as shown in the two examples on the right.

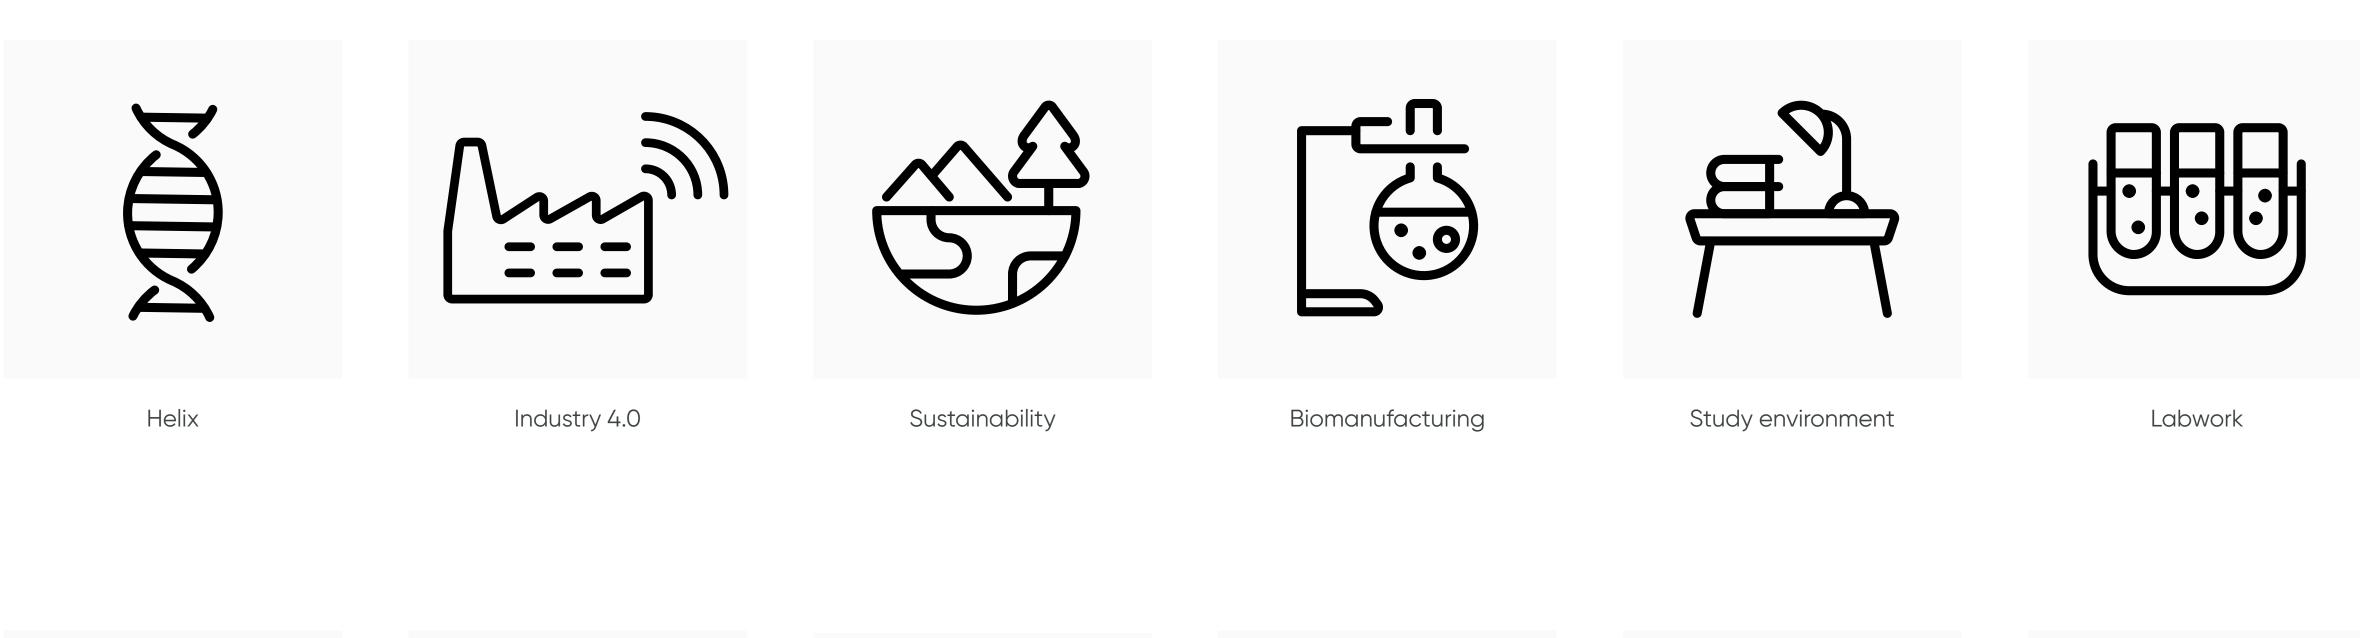

Decorative element

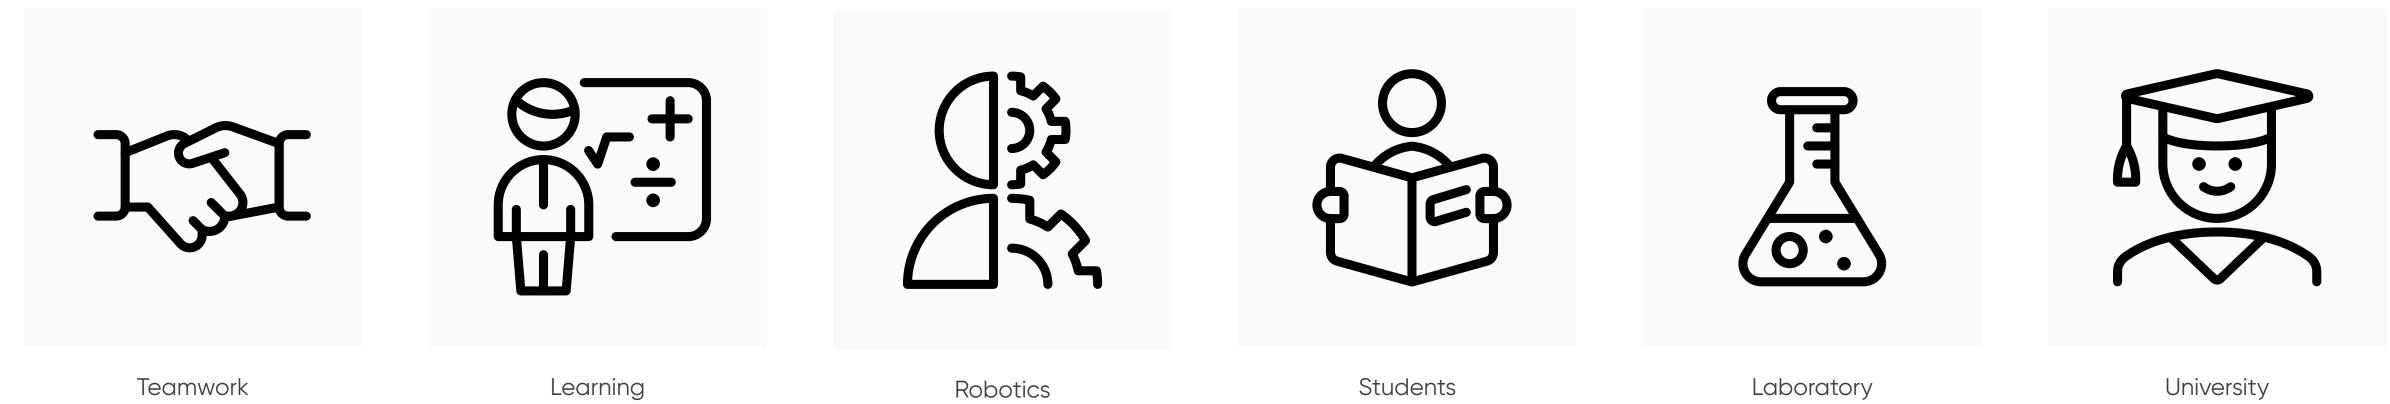

The bridge can also be used as decoration in a layout, shown in the example on the right.
