

VIPER CHAIR

VIPER CHAIR

VIPER is a new chair that both nature and your body will thank you for.

In VIPER, designers Hans Thyge & Co. have combined a circular-economy focus with high ergonomic comfort. The chair is molded from certified, regenerated Scandinavian PP plastic with traceability, which means that the recycled plastic can be traced along the entire production chain.

VIPER is designed to be fully disassembled, so that all of the parts can be reused in new VIPER chairs. This extends the life of the resources and minimizes the drain on nature's limited reserves.

Seat and back design provide high ergonomic support

VIPER provides the best ergonomic support you can find in a chair. Uniting two principles in one – a seat that tilts and a pliant back support.

The tilting seat gives you a sitting posture that ensures optimum blood circulation, helping to keep all your organs healthy. With a newly developed rocking fixture, the seat's movements adjust to your weight for optimized sitting comfort and support.

The organically shaped and pliant back provides perfect ergonomic support of the lower back and adapts to the body's direction and pressure against the back support.

VIPER comes in two sizes with a gas lift feature, in four sizes with runner legs, and in several colors. And it comes with innovative upholstery for even better sitting comfort. Finally, the chair is completely silent, as it contains no mechanical parts.

- Designed and manufactured with respect for nature and focus on ergonomic comfort
- Molded in certified, regenerated Scandinavian PP plastic with 100% traceability
- All chemicals used are REACH and RoHS-certified. This means that they have no harmful effect on nature or people
