What makes Skyfish special

Upload & Download

Upload your company's files via drag & drop or the upload button. You can also upload whole existing file structures via FTP – from anywhere. You can choose between different resolutions when downloading your images.

Organize

Organize your files in individual folders and subfolders. Use the toolbox to index your images and files with titles, descriptions and up to 50 keywords. It is also easy to add copyright and user restrictions in Skyfish.

Share

Share files and folders safely with everyone from co-workers and partners to the press. When sharing a folder you can give externals the right to upload files directly to this folder without having to create them as Skyfish users. Choose time-limited sharing and assign different privileges for different users.

Public Media Gallery

With the public media gallery, you can create your own personalized gallery to share on your website. You can change cover image, logo, folder covers and text color to match your needs. Your gallery is optimized for search engines and it's easy to set up, no coding or CMS expertise needed. [Read more](#)

Files

Skyfish supports all file types e.g. .pdf, .doc, .mov. View your files and metadata in the slideshow inspired preview function. Skyfish even creates a preview on almost every RAW file format. Here is no maximum file size and you never run out of storage space.

Users

Create and administrate users in Skyfish and assign all users different usage rights according to their needs. With Skyfish it is also possible for you to share different folders with each user and you can request that all your Skyfish users verify that they are still using their Skyfish account.

Skinning

Make skyfish a part of your corporate image with the Skinning tool. Change the color of your entire company's Skyfish interface and exchange the Skyfish logo with your company logo. When you share a link it will appear as your company being the sender. [Read more](#)

Search

The powerful Skyfish search engine gives you very precise results. Search by keywords, titles, file names, uploader's name, etc. Skyfish can even do a search for related images.

The Skyfish App

Use the Skyfish app on the go! Shoot, Organize and Share Photos & Files directly from your phone. With the app, you can also create events and collect and present images in real-time. [Read more](#)

Events

Use Skyfish to get content from your next event! Create a Skyfish event to collect, display and share all images from your next event. With the app, you can even make sure the content is uploaded in real-time! [Read more](#)

Comment

Comment your files for easy thought exchange between colleagues and partners.

Security

All of your files are hosted in a secure cloud system. Daily backups are made on 4 different servers which guarantee the highest data safety. Your files are private until you decide to share. A login & password is required to view your files.

Edit

In Skyfish you can edit your images and download the edited version. You can crop, resize, adjust colors and add effects. When editing it will not overwrite the original image file.

Predefined Cropping

Skyfish enables you to predefine an infinite number of cropping sizes for images. The cropping sizes you set up will appear in the cropping section of your users' editor, easily identifiable by the name you assigned to each size. [Read more](#)

Payment

There are no hidden fees when purchasing Skyfish. You just make a monthly payment and you can always upgrade your license to meet your needs perfectly.

Colourbox

From Skyfish you have easy access to all your previous downloaded colourbox images.

Before Skyfish, we had all of our images stored on separate computers that were not accessible to everyone. But now we have all of our image files in one place and can easily share them with our colleagues. It's so simple! Another benefit of Skyfish is that it freed up a lot of our server storage.

Lisbeth Behrendt, Communications Consultant, Middelfart municipality
