PROBLEM SOLVING

PROBLEM	CAUSE	SOLUTION
The water is foggy and unclear	Organic particles in water	1. Adjust the pH value 2. Adjust the chlorine level with CleanTab 3. Add KlarPool
The bottom and the sides are slippery	pH values are too high	
	Dirty filter	
Irritated skin and eyes	pH values are too high	1. Adjust the pH value to 7,0 - 7,4 with pH Minus
Unstable pH level	Alkalinity is too low	1. Adjust the pH value to 7,0 - 7,4 with pH Plus
It is difficult to maintain a stable pH level		
Foaming	The water has high levels of soap or cosmetic residues	1. Change the water
The water is milky or cloudy	Hard water	1. Adjust the pH value 2. Adjust the chlorine level with CleanTab 3. Clean the filter with FilterFix
	Calcium particles are released into the water	
The water is foggy and unclear	The water needs to be replaced	1. Change the water (every 3 months) 2. Adjust the pH value 3. Adjust the chlorine level with CleanTab
The sides of the hot tub have a rough coating	Calcium deposits from hard water	1. Empty the hot tub of water and remove coatings 2. Adjust the pH value
Unpleasant smell from the pipe	Organic coatings in the piping system	1. Clean the piping system with PipeFix

HOW TO ENSURE THAT THE WATER IN YOUR HOT TUB IS ALWAYS CLEAR

WATER CARE FOR YOUR
HOT TUB

2022

EASY WATER CARE

STEP 1 Measure and adjust the pH

Articles: Test Strips (1535), pH Minus (1750), pH Plus (1749)

The pH level must be between 7.0 and 7.4

The pH level in the water is decisive for all water care. Therefore, the first and most important step is to measure and adjust the pH level. To test the current pH level in the water, use Swim & Fun Test Strips. This is the fast and easy way to measure pH. Aim for a value of 7.2.

Over 7.4: Use pH Minus (1750) to lower the pH value

Under 7.0: Use pH Plus (1749) to raise the pH value

STEP 2A Shock treatment when the hot tub has just been filled with water

Article: Clean Tab (1743)

Clean Tab are fast-dissolving tablets that ensure water hygiene in the hot tub.

Dosage - at refill: Add 2 CleanTabs per 1,000 litres of swimming water. You must then measure the swimming water regularly and keep the chlorine content between 2 and 3 ppm (mg per litre).

We recommend dissolving CleanTabs in a clean plastic container of water. First add water. Pour the solution into the water in the hot tub while the circulation pump is running. Alternatively, you can use a floating chlorine dispenser. Note that the dispenser must be used in the closed position. Let the circulation run for 20 minutes after adding. We recommend adding water care products after swimming.

STEP 5 There is more to be done than simply using water treatment agents

Articles: Filterfix (1744), Pipefix (1745), Vacuum Cleaner (1926)

The hot tub filter efficiently collects small particles and impurities, including dead skin cells from those who bathe in it. Every 2-3 weeks, the coatings must be removed to prevent the filter from clogging.

How to do this: Rinse the filter thoroughly under running water so that the filter slats are rinsed of collected dirt and deposits. Then place the filter in a clean plastic bucket and fill the bucket with clean water until the filter is completely covered. Add 100 ml FilterFix per 10 l water and leave the filter in the solution for at least 12 hours.

Once you have rinsed the filter thoroughly under running water, it is ready to use again.

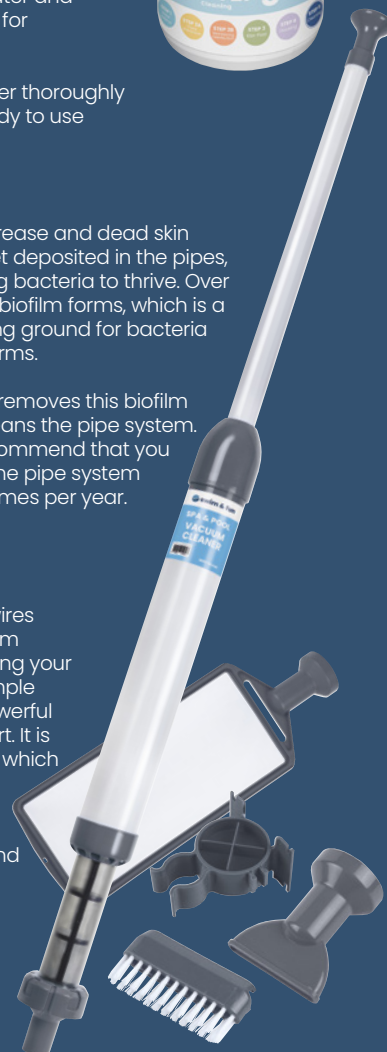

Body grease and dead skin cells get deposited in the pipes, allowing bacteria to thrive. Over time, a biofilm forms, which is a breeding ground for bacteria and germs.

PipeFix removes this biofilm and cleans the pipe system. We recommend that you clean the pipe system 2 to 4 times per year.

Clean your hot tub without wires and hoses with a Spa Vacuum Cleaner, which makes cleaning your hot tub quick and easy. A simple pump function creates a powerful vacuum that sucks up the dirt. It is collected in a filter container which is easy to empty.

The set includes a brush, a surface skimmer, a wide and a narrow suction nozzle and a practical wall hanger.

SPA CARE SET

Practical set containing all the cleaning equipment needed to keep your hot tub clean and inviting.

The set includes brush head, telescopic rod, surface skimmer head and cleaning sponge.

POOL LAB

Easy, digital and accurate water analysis

Digital tester for precise analysis in a private hot tub. Get accurate two-digit water readings by simply dipping the Pool Lab tester into the water.

Pool Lab is a digital measurement of 9 parameters: pH, Chlorine, Alkalinity, Cyanuric Acid, Active Oxygen, Bromine, Chlorine Dioxide, Ozone and Hydrogen Peroxide. Refill tablets are included.
